The City of Marathon Stormwater Management System Pilot Project

1. Introduction

The City of Marathon has identified stormwater pollution as a serious issue and is undertaking a proactive response to the problem by implementing a stormwater management system. The Stormwater Management Master Plan identified several problem sites within the City limits that should be addressed, including the intersection of Louisa Street and 39th Street. This site is an ideal location for a stormwater management system pilot project for several reasons, including its 1) presence in a fairly dense neighborhood that is comprised of residents earning below the City's mean income, 2) existence along a highly traveled road leading to several commercial facilities and nearby fish markets, 3) extensive history of significant flooding during storm events, and 4) proximity to several community establishments. Due to the site's location in a mixed use (residential and commercial) neighborhood, many people will be exposed to this important project. In addition, there is currently no facility/collection system in place to address persistent stormwater problems at this location. While the project design is not finalized, one potential management system design, taken from the City of Marathon's Stormwater Management Master Plan (Calvin, Giordano & Associates, Inc., 2002), would cover an area equivalent to 1.03 acres. At this time, the specific design and cost of the project has not been fully determined.

The overall benefits of a stormwater management system are significant and central to the water quality and flood protection elements of the District's mission. Because the selected site is adjacent to a canal that serves as a boat basin, runoff quickly reaches the open waters of the Gulf of Mexico. Unfortunately, this stormwater runoff pollution flows freely to the open waters as no gates, air flows, or similar barriers are located on the canal. The City is committed to constructing a quality pilot project that can be used as a template for similar projects throughout the City.

2. Scope of Services

The project consists of a closed drainage system, with an exfiltration trench with a 24 inch diameter injection (gravity) well and overflow outfall.

District funds in an amount not to exceed \$150,000 will be applied toward the estimated \$332,000 total cost of the project. District funds shall be used for the design and construction of the project, returning the landscape to its original state, public signage and information about the location and purpose of the project, and any safety measures that may be necessary to protect the general public as well as maintain the project.

3. Detailed Project Description

The proposed stormwater management system is based on a closed drainage system, exfiltration trenches, 24 inch diameter gravity well, and overflow outfall. The estimated total cost of the project includes roadway and swale reconstruction. This project will impact a total of 1.03 acres.

4. Deliverables

The City will provide the District with semiannual progress reports. Upon completion of project construction, the City will provide a site visit for the District Project Manager. It is estimated that the project will be constructed within one year of contract execution.
